                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a method of treating a mammal for a condition CC associated with undesired cell proliferation such as cancer or CC carcinoma. The method involves administering a composition comprising CC A proliferation inducing Ligand Receptor (APRIL-R) also referred as CC interaction between APRIL and its cognate receptor(s). This method is CC useful for treating undesired cell proliferation with as cancer or CC carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, CC prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (Grave's CC disease, systemic lupus erythematosus-SLE); hypertension, cardiovascular CC diseases, renal disorders, B-cell lympho-proliferative disorders, CC diseases, renal disorders, organ transplantation, inflammation and CC unman immunodeficiency virus (HIV), and for treating, suppressing or CC altering an immune response involving a signalling pathway between CC also referred as BCMA or BCM protein, Fc region of human immunoglobulin CC (IgC) and a signal sequence from murine Ig kappa cDNA.
                                                                                                                                                                                                                                                                                                                                                      Matches 40;

cc the TNF (tumour necrosis factor) family, acting as an immunoregulatory cagent, and also plays a role in the development of hypertension and crelated disorders. BAFF-R, fusion proteins containing it, and BAFF-R-CC specific antibodies can be used for inhibiting B-cell growth, dendritic ccell-induced B-cell growth and maturation, and immunoglobulin production, can disorders, hypertension and renal disorders. B-cell lymphoproliferative cd disorders, hypertension and renal disorders. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV clintering or BAFF-R specific antibodies may be used for treating, groteins or BAFF-R specific antibodies may be used for treating pathway compressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R clintibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, caprograms and inherited B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding chuman BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The present sequence represents the BAFF-R fusion protein BAFF-R-C, cc comprising a mouse IgG-kappa signal sequence, residues 1-153 cof human BAFF-R and a human IgG-Fc sequence.

                                                                                                                                                                                  cc activator and intracellular CAML interactor) and/or B cell maturation activator and intracellular CAML interactor) and/or B cell maturation capcific binding partner for APRIL (670, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI. BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI or BCMA in a mammal which is useful for treating B-cell or T-cell CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. ARRIL, BCMA and TACI CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases, drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple colserosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, CC colseases, protozodi and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence is human BCMA protein-immunoglobulin Fc region fusion protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  닭
                                                                                                                                                                                                                                                                                                     The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation protein (BOMA) activity in a mammal. The method comprises administering protein (BOMA) activity in a mammal. The method comprises daministering pattner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/C family ligand), having the consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI C and/or BCMA in a mammal which is useful for treating B-cell or T-cell (Iymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antagonists are useful for treating inflammation and immune function c disease such as diarrhoea, psoriasis, allergies, pneumonia, atopic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (astense continue) activity allergies are continued as a control and activity in the second continued as a control and activity activity and activity and activity activity activity and activity activity and activity activity and activity ac
                                                                                                                            disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), selectorma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal bacterial, protozoal and viral infections (HIV), atherosclerosis, cand with leucocyte infiltration of the skin or organs. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; transmemutance correction; BCWA; tumour necessition; pancreatic; lymphoproliferative disorder; tumour; lung; gastrointestinal; pancreatic; lymphoproliferative disorder; tumour; diarrhoea; psoriasis; colitis; lymphoproliferative immune disorder; diarrhoea; psoriasis; colitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12-MAY-2000; 2000US-204039P.

                                                 protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI antegonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases, drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the Nin or organs.                               CC protein (BCMA) activity in a mammal. The method comprises administering Ca specific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI. BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC imphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC disease, colitis, respiratory allergic disease (asthma, hypersensitivity lung CC disease), drug and insect sting allergy, inflammatory bowel disease (CTohn's disease, colitis), scleroderma, autoimmune disease (multiple colerosis, rheumatoid arthritis, systemic lupus crythematosus), fungal, CC bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence ci shuman BCMA cysteine-rich extracellular region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

             protein (BCMA) activity in a mammal The method comprises administering a specific binding partner for APRII (G70, a tumour necrosis factor-TNF family ligand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI or BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, castrointestinal, pancreatic or prostate tumour. APRII, BCMA and TACI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cytostatic; B cell maturation protein; BCMA; tumour necrosis factor; TNF; lymphoproliferative disorder; tumour; lung; gastrointestinal; pancreatic; prostate; inflammation; immune disorder; diarrhoea; psoriasis; colitis; drug allergy; dermatitis; pneumonia; asthma; inflammatory bowel disease; Crohn's disease; scleroderma; autoimmune disease; multiple sclerosis; human immunodeficiency virus; HIV; systemic lupus erythematosus; cancer;
 antagonists are useful
                                                                                                                                        The invention relates to a method for inhibiting TACI (transmembrane activator and intracellular CAML interactor) and/or B cell maturation
                                                                                                                                                                                       Disclosure;
                                                                                                                                                                                                                     administering
family ligand
                                                                                                                                                                                                                                Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a bimding partner for APRIL, a tumor necrosis factor
                                                                                                                                                                                                                                                                                                 WPI; 2002-066686/0

                       The present sequence represents a BCMA (not defined) polypeptide. BCMA is a necrosis factor (NP)-kB activator. The method of the invention is used to identify compounds which modulate BCMA activity (and thus NF-kB activity). The specification describes a method of identifying a polypeptide which increases gene expression from a promoter. The method involves contacting a library of with a cell which expresses a recombinant anti-cell death gene and a reporter gene operably linked to the promoter, and then determining whether the expression of the reporter gene is altered as a result of contact with library. The method is useful for identifying polypeptides which increase or decrease gene expression from a promoter. The BCMA polypeptide or nucleic acid are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease (Crohn's disease, colitis), scleroderme, autoimmune disease (multiple sclerosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence represents a human BCMA protein, a B cell protein related to transmembrane activator and CAML-interactor (TACI) receptor. TACI is a tumour necrosis factor (TNP) receptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell protein) receptor contain a cysteine rich domain, and are used for inhibiting ztnf4 activity. Ztnf4 is a TNP ligand. They may also be used for inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The zcnf4 activity and BR43x2, TACI or BCMA receptor-ligand engagement is associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              systemic lupus erythematosus; myasthenia gravis; multiple sclerosis; rheumatoid arthritis; asthma, bronchitis; emphysema; pyelonephritis; end stage renal failure; glomerulonephritis; vasculitis; nephritis; renal neoplasm; multiple myeloma; lymphoma; light chain neuropathy; immune response; immunosuppression; graft rejection; joint pain; graft versus host disease; inflammation; swelling; anaemia; septic shock; insulin dependent diabetes mellitus; Crohn's disease; hypertension;

                                                     The invention relates to methods of using one or more agonists or antagonists to modulate the activity of the members of TNF (tumous necrosis factor) especially TALL-1, APRIL and TNF receptor (TNFR) e.g. TACI or BCMA. The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity. TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal neoplasms, multiple myelomas, lymphomas, light chain neuropathy, amyloidosis, moderating immune response, immunosuppression, graft versus host disease, inflammation, insulin dependent diabetes mellitus, Crohn's disease, joint pain, swelling, anaemia, or septic shock. BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, agonists or antagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol or renal emboli.
            They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosia

                associated with undesired cell proliferation such as cancer or carcinoma. The method involves administering a composition comprising A Proliferation Inducing Ligand Receptor (APRIL-R) also referred as B cell maturation protein (BCM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (Grave's diseases, srenal disorders, B-cell lympho-proliferative disorders, immunosuppressive diseases, organ transplantation, inflammation and human immunodeficiency virus (HIV), and for treating, suppressing or

Inhibiting dendritic cell-induced B-cell growth, maturation and lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-antibody homolog anti-BAFF-R B-cell

Claim 20; Fig 1; 59pp; English.

as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory agent, and also plays a role in the development of hypertension and related disorders. BAFF-R, fusion proteins containing it, and BAFF-R-specific antibodies can be used for inhibiting B-cell growth, dendritic cell-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders. The BAFF-R proteins may also disorders, hypertension and renal disorders. The BAFF-R proteins may also The invention relates to the use of a BAFF receptor (BAFF-R, also known

The BAFF-R proteins or BAFF-R specific antibodies may be used for treating, suppressing or altering an immune response involving a signalling pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R inhibites B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, crave's disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders. The
                                                                                                                                                                                                          Shu
The present invention relates to Tumour necrosis factor (TNF) and ApoL-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid
                                                    Claim 37; Page 104-105; 112pp; English.
                                                                                    Isolated TALL-1 protein is used to identify compounds that regulate lymphocyte proliferation, used to treat B lymphocyte associated autoimmune disorders -

The present sequence is a human B cell maturation factor (BCMA) protein. It is the receptor for TALL-1 protein. BCMA gene is located on chromosome 16. In human tissues, BCMA is expressed by spleen and lymph nodes but not by brain, muscle, heart, lung, kipancreas, testis and placenta. BCMA mRNA is absent in the pro-B lymphocyte stage but its expression increases with B lymphocyte

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or renal disease such as glomerulonephritis, vasculitis, chronic lyn leukaemia, nephritis, and pyelonephritis, and for treating renal neoplasms, multiple myelomas, lymphomas, light chain neuropathy, or amyloidosis, hypertension, large vessel diseases, graft rejection and Crohn's disease. (I) is useful for modulating the immune system, for regulating B cell responses and development, for modulating development of other cells, antibody production and cytokine production, and for modulating T and B cell communication. The present sequence represents a protein which is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             activities, and can be used in gene therapy. (I) can be used for inhibiting, in a mammal, the activity of a ligand that binds Ztnfr12 (e.g. ZTNF4), for treating disorders and diseases associated with B lymphocytes, activated B lymphocytes or resting B lymphocytes, and for inhibiting the prdiferation of tumour cells. (I) is useful for treating autoimmune disorders such as systemic lupus erythematosus, myasthenia gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, rheumatoid arthritis, bronchitis, emphysema and end stage renal failure
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present inventor (I) has cytostatic, immunosuppressive, designated Ztnfr1d (I). (I) has cytostatic, immunosuppressive, dermatological, antiinflammatory, neuroprotective, antidiabetic, antirheumatic, andiarthritic, antiasthmatic, nephrotropic and hyrantirheumatic, and anniarthritic, antiasthmatic, incomplete and for an incomplete and for the complete and the

```
CC the TNF (tumour necrosis factor) family, acting as an immunoregulatory CC agent, and also plays a role in the development of hypertension and CC related disorders. BAFF-R, fusion proteins containing it, and BAFF-R-CC specific antibodies can be used for inhibiting B-cell growth, dendritic ccll-induced B-cell growth and maturation, and immunoglobulin production, and in the treatment of autoimmune disorders. B-cell lymphoproliferative cl disorders, hypertension and renal disorders. The BAFF-R proteins may also be used in the treatment of immunosuppressive disorders and HIV cc infection, and in patients undergoing organ transplantation. The BAFF-R cc proteins or BAFF-R specific antibodies may be used for treating, cl suppressive of a serial growth and maturation it is useful for treating pathway between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R cc inhibits B-cell growth and maturation it is useful for treating diseases such as systemic lupus erythematosus, autoimmune haemolytic anaemia, cc grave's disease, multiple myeloma, B-cell carcinomas, leukaemia, rapidly progressive glomerulonephritis, and lymphomas. Nucleic acids encoding the autorated Baff-R may be used in gene therapy to treat tumours, lymphomas, autorates and inherited Baff-lastoriated discorders.
                                                                                                    present sequence represents a human BAFF-R protein sequence as encoded by plasmid PJST535. However, this BAFF-R protein sequence is 27 amino acids shorter than that given in anscence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Inhibiting dendritic cell-induced B-cell growth, maturation and B-cell lympho-proliferative disorder by administering BAFF-receptor polypeptide, chimeric molecule comprising receptor or anti-BAFF-R antibody homolog
                                                    Sequence
                                                                                                                                                                                 human BAFF-R may be used in gene therapy to treat tumours, lymphomas, autoimmune disorders and inherited B-cell-associated disorders.
